

The Double-Edged Sword of Neurobiological Association:

Mental Illness Stigma Trends & Implications

Emily Burns
University of California, Berkeley

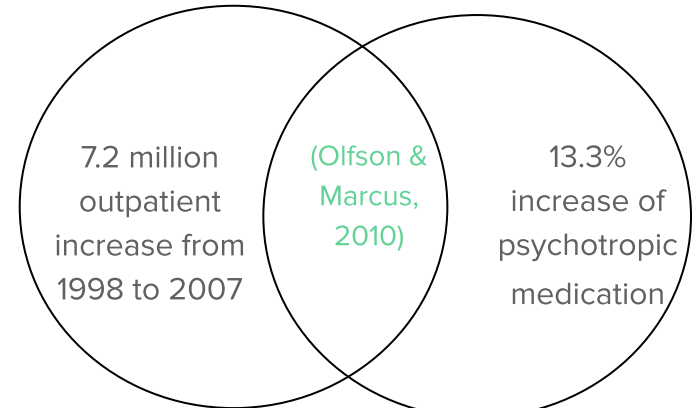

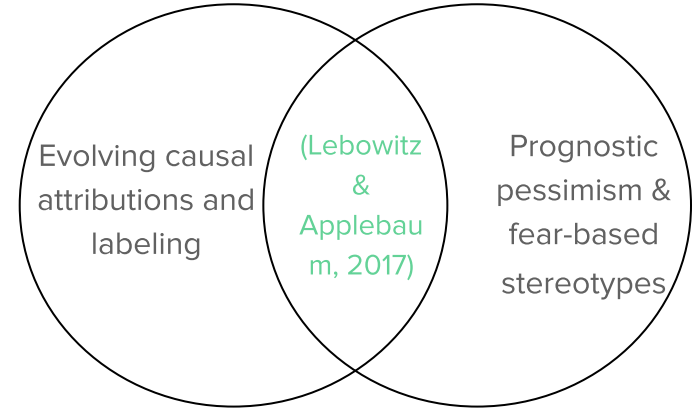

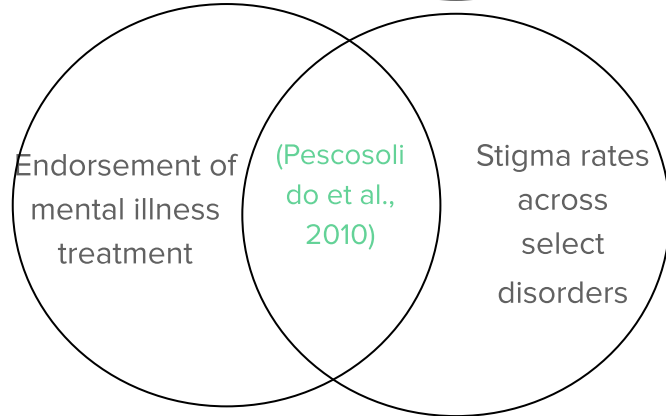

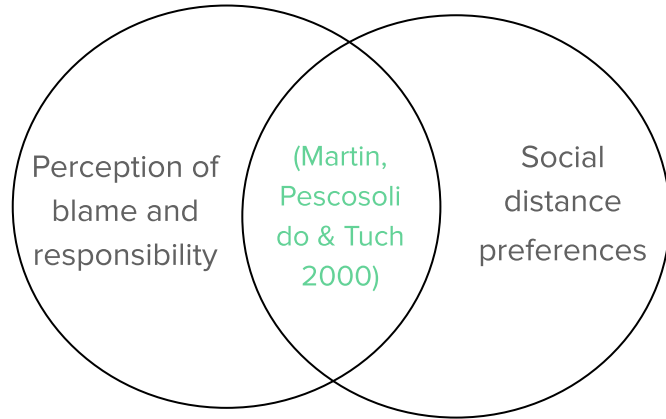

Outline

- Trends
- Research Design
 - ◆ Jenkins et al. 2017
 - ◆ Study 1a
 - ◆ Study 1b
- Implications
- Future Steps

Trends: A Change in Approach

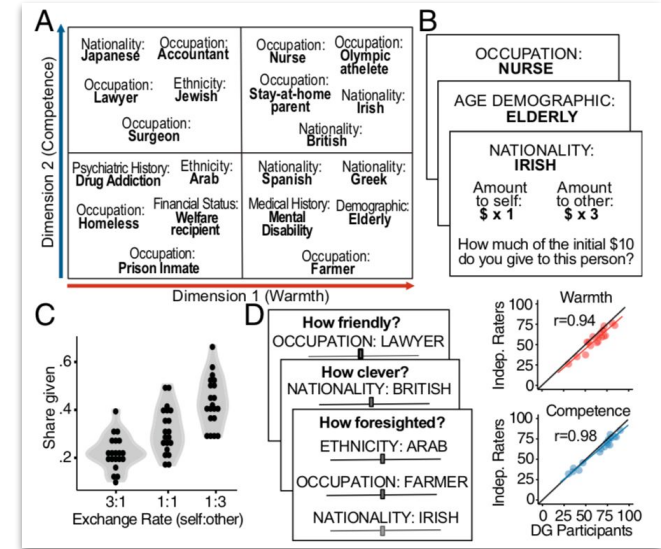

- “Decade of the Brain” President’s (Jones & Mendell, 1999)
 - ◆ New Freedom Commission on Mental Health (US Department of Health and Human Services, 2003)
- NIMH and NIH Funding
 - ◆ RDoC (Insel et al., 2010)
 - ◆ BRAIN Initiative (Schwartz, 2016)
- Psychotropic Medication (Wilkes et al., 2000)

Change Can Come At a Cost...

Jenkins et al. 2017

- Mechanisms behind social group disparity and societal structure
- Societal perception....
 - ◆ Warmth and competence
- ... Translates into societal valuation
 - ◆ Resource allocation
- **Takeaway:** Assumptions about “outgroups” affect behavior in a predictable pattern

Study 1, Part A: Design

- Participants rated two syndromes on 21 traits each (0-100 scale, 0 = not at all, 100 = very)

- MTurk Sample, $n = 347$
 - ◆ Average age 35.28 years (SD = 10.84), 41% female, 70% White, 12% Asian

Organization of Stereotypes Onto Underlying Factors

Depression

Component Matrix ^a			
	Component		
	1	2	3
d.unpredic	-.362	.598	.397
d.sincere	.789	-.066	.363
d.danger	-.335	.775	.041
d.trust	.834	-.040	.084
d.friendly	.804	.173	-.043
d.helpless	-.330	.445	.433
d.moral	.777	-.031	.254
d.understanding	.769	.034	.206
d.intelligent	.796	-.034	.325
d.skilled	.820	.118	.183
d.confident	.498	.491	.518
d.creative	.732	.115	.154
d.capable	.786	-.018	-.054
d.angry	-.217	.737	.231
d.desirable	.747	.196	-.240
d.happy	.471	.531	-.558
d.violent	-.213	.854	-.005
d.success	.760	.170	-.142

Extraction Method: Principal Component Analysis.
a. 3 components extracted.

Schizophrenia

Component Matrix ^a			
	Component		
	1	2	3
s.unpredict	-.501	.591	-.233
s.sincere	.769	.058	-.288
s.danger	-.455	.767	.106
s.trust	.813	-.063	.074
s.friendly	.798	.078	-.036
s.helpless	-.189	.529	-.224
s.moral	.729	.132	-.350
s.understanding	.826	.097	-.067
s.intelligent	.673	.322	-.343
s.skill	.825	.182	-.030
s.confident	.701	.191	.391
s.creative	.546	.378	-.345
s.capable	.779	.077	.015
s.angry	-.294	.734	.121
s.desirable	.772	.045	.262
s.joyful	.684	.105	.376
s.violent	-.348	.741	.326
s.success	.811	.139	.294

Extraction Method: Principal Component Analysis.
a. 3 components extracted.

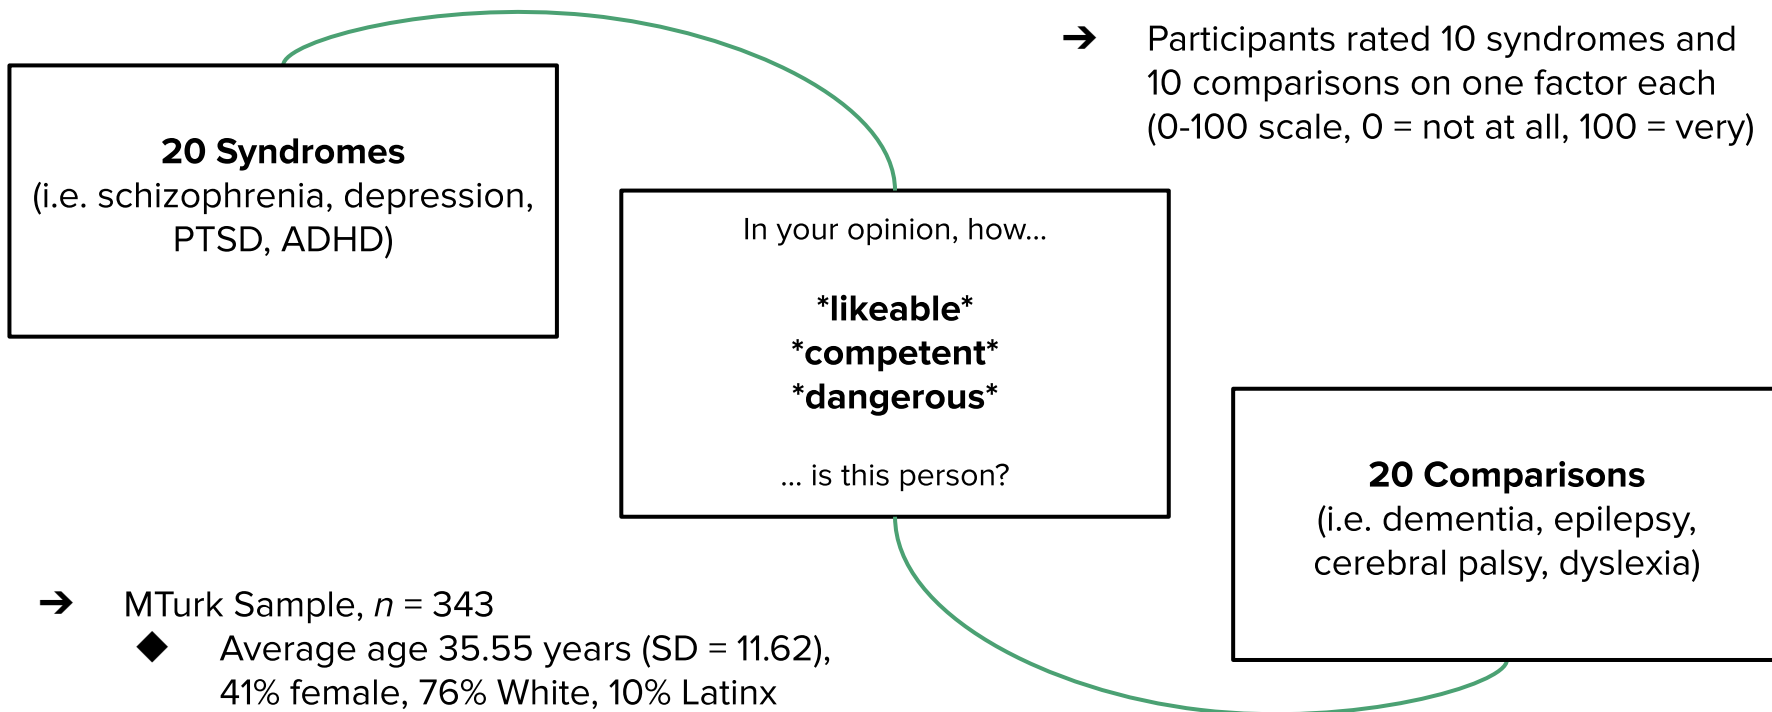

Factors

1. Competence
2. Danger
3. Likeability

Matched T-Test

Pair	Correlation	Sig.
Unpredictable	.391	.00
Dangerous	.477	.00
Sincere	.331	.00
Trustworthy	.381	.00
Friendly	.514	.00
Helpless	.418	.00
Moral	.453	.00
Understanding	.416	.00
Intelligent	.641	.00
Skilled	.476	.00
Confident	.510	.00
Creative	.456	.00
Capable	.417	.00
Angry	.403	.00
Desirable	.593	.00
Joyful	.484	.00
Violent	.392	.00
Successful	.450	.00

Study 1, Part B: Design

And Another One...

Likability

Competence

Dangerousness

Future Steps

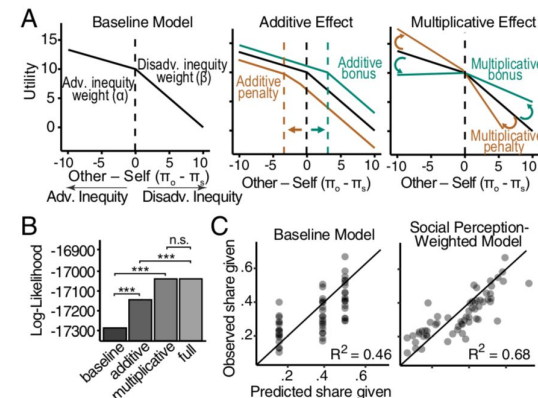

→ Study 1 cont.: Social valuation via Dictator Game

- ◆ Geo-location and exposure to MI effects
- ◆ Computational models

➔ **Study 2:** Testing for generalizability of findings

across populations

➔ **Even further:** Trends & field settings

Jenkins et al., 2017
